

# How long can solar panels last

How long do solar panels last?

Most reputable manufacturers offer production warranties for 25 years or more. The average break even point for solar panel energy savings occurs six to 10 years after installation. If the panels continue to produce at a high level for another 15 years after that, you will end up saving thousands of dollars during the solar panels' lifespan.

Do solar panels stop working after 25 years?

After 25 years, solar panels will be less efficient and produce less power. This doesn't mean your solar panels will stop working, but they may be less effective at powering your home and lowering your energy savings. When panels degrade to the point where they no longer produce power, they're ready to be recycled.

How long does a solar system last?

Everybody's solar system is different, but most systems can be expected to last at least 25-30 years before performance degrades significantly. With the average payback period around 8 years, that's more than enough time for a system to pay itself off several times over.

Do solar panels expire?

There is technically no expiration date on solar panels. However, over time, they naturally tend to become less efficient at producing energy. Some panels can also break due to physical damage from extreme weather conditions.

How long do polycrystalline solar panels last?

You'll need more polycrystalline panels to match the power output of monocrystalline options. Polycrystalline panels also have a shorter life span. According to the American Solar Energy Society, monocrystalline panels can last up to 40 years, while polycrystalline options last for 35.

How much do solar panels deteriorate a year?

The National Renewable Energy Laboratory (NREL) has been tracking degradation rates for the last several years as part of its Photovoltaic (PV) Lifetime Project. NREL's findings indicate that solar panels have an average degradation rate of 0.5% per year.

That's why one of the most common questions people ask before installing a system is, "How long do solar panels last?" The current industry standard is that a solar panel's life expectancy is at least 25 years, though many can last ...
