

How long is the appropriate investment cycle for photovoltaic panels

How long do solar panels last?

Most homeowners in the United States can expect their solar panels to pay for themselves in between 9 and 12 years, depending on the state they live in. Some states, like Hawaii and Massachusetts, offer solar payback periods as short as five years, while payback time in states like Louisiana and North Dakota can stretch to 16 years or more.

How long does it take for solar panels to pay back?

The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period. A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

What is a solar panel payback period?

"Solar panel payback period" is the amount of time it'll take you to completely pay off your solar power system through savings on your electric bill. It is calculated by taking the total cost to install the system, then subtracting solar incentives and/or rebates, and monthly electric bill savings until the total cost has been paid off.

How long does a solar PV system last?

Assuming 12% conversion efficiency (standard conditions) and 1,700 kWh/m² per year of available sun-light energy (the U.S. average is 1,800), Alsema calculated a payback of about 4 years for current multicrystalline-silicon PV systems.

How much do solar panels save a year?

\$1,200 Savings Per Year (Total savings per year if your solar panels reduce your energy bill by \$100 each month) / \$12,000 Investment = 10 Year Solar Payback Period This calculation assumes that your electricity rates don't go up. If they do, your savings are also going to increase, and your payback period will be shorter.

How long does it take a solar shopper to break even?

The average EnergySage solar shopper breaks even in about seven to eight years. You can calculate your breakeven point by dividing the total cost of your system by your annual savings. Your electricity use and cost, the cost of solar, and your access to solar incentives all impact your solar payback period.
