

How to apply transparent film to photovoltaic panels

The ASCA ® film is able to take on any shape and size according to customers' specifications and thanks to the laser structuring method the module design itself is personalized. The electrical parameters are easily tailorable within the ...

By using photovoltaic technology (PV) in a glass application you could effectively turn the glass surfaces of a building into solar panels which can be used to power the building. Imagine the entire skin of a high rise building effectively acting as ...

DIAMON-FUSION® is a patented solar panel coating that works by forming a protective film over the panels' surface. This film not only wards off debris but also improves the panels' water repellency, allowing rainwater to ...

What is a thin film solar panel? Thin-film solar panels are a type of photovoltaic solar panels that are made up of one or more thin layers of PV materials. These thin, light-absorbing layers can be over 300 times thinner than a traditional ...
