

# How to calculate the annual value of wind power generation

What is a wind turbine calculator?

FAQs This wind turbine calculator is a comprehensive tool for determining the power output, revenue, and torque of either a horizontal-axis (HAWT) or vertical-axis wind turbine (VAWT). You only need to input a few basic parameters to check the efficiency of your turbine and how much it can earn you.

How to calculate wind power?

Below you can find the whole procedure: 1. Sweep area of the turbine. Before finding the wind power, you need to determine the swept area of the turbine according to the following equations: For HAWT:  $A = \pi \cdot L^2$  For VAWT:  $A = D \cdot H$  where:  $H$  -- Turbine height. 2. Calculate the available wind power.

How do you calculate the output power of a wind turbine?

Multiplying these two values produces an estimate of the output power of the wind turbine. Below you can find the whole procedure:  $C_p$  is the turbine efficiency. It must be lower than the Betz limit (59.3%), and is typically between 30-40%

How much energy does a wind turbine produce?

A range of 1.8-90 kWh of energy can be produced by a wind turbine, depending on its energy capacity and size. The table below shows energy output generated by wind turbines of different power capacities: How much energy does a 500W wind turbine produce? 9 kWh per day as the actual output.

How do I know if a wind turbine produces enough electricity?

An estimate of the annual energy output from your wind turbine, kWh/year, is the best way to determine whether a particular wind turbine and tower will produce enough electricity to meet your needs. A wind turbine manufacturer can help you estimate the energy production you can expect.

How do you calculate a wind turbine RPM?

For HAWT:  $RPM = 60 \cdot v \cdot TSR / (\pi \cdot L^3)$  For VAWT:  $RPM = 60 \cdot v \cdot TSR / (\pi \cdot D^3)$  Wind Turbine Calculator This wind turbine calculator is a comprehensive tool for determining the power output, revenue, and torque of either a horizontal-axis (HAWT) or vertical-axis turbine (VAWT).

The wind energy calculator allows you to calculate the wind energy and wind turbine energy using the equations defined above. You need to enter the wind (air) speed, wind turbine blade length, wind turbine efficiency, wind turbine ...
