

How to calculate the height of photovoltaic bracket

The first step in calculating the inter-row spacing for your modules is to calculate the height difference from the back of the module to the surface. To do that, follow this calculation below: $\text{Height Difference} = \sin(\text{Tilt Angle}) \times \text{Module Width}$

Estimating the number and size of rails, mid and end clamps, L-feet, or standoffs for your solar installation could be troublesome. This brief introduction offers insight into estimating the number of solar racking parts a project might need.
