

How to clean the generator air shroud

How do you clean a generator?

Removing harmful dirt and debris not only maintains the life of your generator, but it gives you a chance to spot any service issues that may be developing. Blow off dust and debris with your air compressor or compressed air (canned air), then wipe the surface with a clean cloth and degreaser (non-flammable) and soft brush.

How do you remove air filter from a generator?

Remove the rubber hose on the top of the air filter assembly by gently pulling the hose from the housing. You can then remove the whole air filter assembly from the generator. Wash it with soapy water then let it air dry until all the water has dried up. Slowly and carefully slide the air filter assembly onto the generator.

How often should a generator air filter be cleaned?

Cleaning air filters reduces their effectiveness and with each time making them worse at air filtration, a few washes can render them useless at the risk of damaging your generator. Some air filters' effectiveness can reduce as much as 25% just after the first wash. As such, you should consider just buying a new one after about 3 washes.

How to clean air filter?

Pressurized water can be used to clean the air filter at a maximum pressure of 40 PSI (276 kPa). The water should be directed with a nozzle onto the surface of the filter on the clean side in an up and down motion. After that, the same process should be repeated on the dirty side of the air filter. Drying should be done by air.

How do you replace a foam filter on a generator?

Place the foam filter into the housing unit with the oiled side facing the engine. Finally, replace the air cleaner cover then fasten the clips once again. Throughout this procedure, ensure you have followed the guidelines of your manufacturer to avoid damaging any part of the generator.

How do I reattach my air filter hose?

Make sure the alignment and orientation are correct as you do so. Reattach the three nuts as follows: one in the middle of the air filter housing, one on the top left side of the air filter housing, and the last one at the bottom on the backside of the air filter housing. Correctly plug in each hose.
