

How to do foreign trade of photovoltaic panels

How does international trade affect solar PV technology?

Consequently, the increase in the global supply of solar PV panels, which exceeds the global demand, lowers the final price for such products in all global markets. This finding suggests that international trade could lead to further price reductions, thus fostering the development and deployment of solar PV technology.

Does trade protectionism impede solar PV trade between China and EU?

On the other hand, solar PV trade between China and the EU is impeded by trade barriers. According to the UN Comtrade database, China's PV products account for 45.0%, 33.3%, and 25.0% of the EU market in 2011, 2013, and 2015 respectively, verifying the effect of trade protectionism.

Can photovoltaic products boost China's economy?

As a crucial means of generating clean energy, photovoltaic products hold considerable development potential (Zhu et al., 2021), have even been identified by the National Development and Reform Commission's Energy Research Institute as a crucial tool for stabilizing China's foreign trade and boosting the economy.

Does trade protection affect global PV trade patterns?

The global PV trade patterns Empirical studies predict that a shock that hits anywhere would be transmitted throughout the trade network (Prusa, 1997). Accordingly, the impact of trade protection on Chinese PV export will inevitably transmit to global PV trade patterns.

How can Chinese photovoltaic products be exported to south and Southeast Asian countries?

Strengthening international governance and cooperation is crucial for promoting the export of Chinese photovoltaic products to South and Southeast Asian countries. By improving governance levels and transparency, and establishing a stable and predictable trade environment, countries can jointly promote the development of the green economy.

How does trade deflection affect China's PV market?

Thus, firms in China are urged to find new markets. As a result, China's PV export to the ROW might increase (trade deflection) while China's PV import from the ROW will decrease (trade depression). The effects of trade destruction and trade diversion have been widely confirmed (Durling and Prusa, 2006; Park, 2009).
