

How to generate electricity with solar powered fan toys

How do you make a solar powered fan?

With the "Green Science Fair" contest running on Instructables we decided upon making a solar powered fan out of it. It's really pretty basic. We took a battery holder (2 AA batteries) and wired it into a 1.5V to 12V step up circuit. Now that we had it outputting 12V we hooked it into the fan.

Can you make a solar powered fan out of an old computer?

When we were taking apart an old computer (fun stuff!) we discovered a lot of very cool parts that we could use to make stuff. One of the cooler ones (sorry, very lame pun) was a 12V cooling fan. With the "Green Science Fair" contest running on Instructables we decided upon making a solar powered fan out of it. It's really pretty basic.

Are You a fan of solar energy?

You might say we're big "fans" of clean energy like wind and solar -- and science in general! We're always looking for creative ways to teach kids about air pollution, health, and renewable energy. One of our fall interns, Vaishali, found this video (above) that shows how to make a simple and efficient personal fan using solar energy!

How do you use solar power?

Experiment with solar power by building your own solar-powered robot or oven or by testing ways to speed up an existing solar car. Or analyze how solar cells or panels work. Now You're Cooking! Building a Simple Solar Oven Here is a project that uses direct solar power, gathering the sun's rays for heating/sterilizing water or cooking.

What is solar energy & how does it work?

The sun is the ultimate energy source for all living things over the earth's surface. Solar cells, photocells use solar energy from the sun to produce electricity. These cells are also joined into solar panels to generate power for heating and lighting purpose.

How do solar cells work?

Solar cells, photocells use solar energy from the sun to produce electricity. These cells are also joined into solar panels to generate power for heating and lighting purpose. A clear sky, scanty rainfall, and the absence of clouds are the ideal conditions to trap the solar energy.
