

# How to install the panels quickly when the photovoltaic rack is high

Does solar racking work on a roof?

Proper solar racking safely affixes solar panels to buildings, so your racking system must be compatible with your roof. The essential components of a solar racking system include flashings, mounts, rails, and clamps. The top solar panel racking brands include SnapNrack, Unirac, IronRidge, Quick Mount PV, EcoFasten, and AllEarth Renewables.

What is solar panel mounting & racking?

What is Solar Panel Mounting and Racking? Mounting solar panels refers to the process of installing solar energy systems onto a structure such as a building or ground mount. The procedure usually involves securing the panels with a racking system on the rooftop or ground and connecting the system to the power grid.

What is a solar racking system?

A solar racking system safely affixes solar panels to different surfaces, such as your roof or yard. Solar companies use racking products to hold equipment in place during an installation.

How much does solar racking cost?

Solar racking is a vital part of any solar installation, but represents only a small percentage of total system costs--right around 3%, according to the National Renewable Energy Laboratory (NREL). For an average-priced 11 kW solar panel system (\$31,460 before incentives), that comes out to \$1,068 for racking equipment.

What makes a solar panel racking system different from a rail system?

Heavier-- these setups are far heavier than their rail-free counterparts. Flexibility -- the rail system doesn't lend itself to simple, modular installations. This solar panel racking mounts a row or multiple rows of PV modules to the ground.

Do solar panels need a roof rafter?

Solar installers need access to your attic or the underside of your roof during an initial site visit to ensure that your rafters are structurally intact and appropriately spaced to accommodate the mounts for your solar panel system. 3. Rails Mounts hold up rails, the component of solar racking that your solar panels sit directly on top of.

Whether you have chosen a flush or "roof-ground" mount, the racks (the rails on which the solar panels sit) need to be mounted to your roof. These are generally mounted in rows across the length of your roof. There are a few things you ...
