

# How to remove the fan of the new energy storage cabinet

How do you cool down a computer enclosure?

Most systems remove heat from the computer enclosure through a combination of methods, such as a processor chip cooled using a heat sink with a fan (forced convection). The key to keeping equipment cool is to remove heat from the cabinet while supplying cool air to the places that need it.

How does a cabinet cooler work?

A cabinet cooler works by drawing hot air from the interior of the cabinet over a heat exchanger and blowing the cooled air back into the cabinet. The heat absorbed is then transferred to an outside heat exchanger where it is cooled by ambient air using another fan.

Can a fan filter be installed on a cabinet wall?

The fan filter unit, like those of the Viridis series, can be installed on a cabinet wall, in the lower area if it works in compression (direct air flow) or higher if in suction (reverse air flow). There are different types of installation combinations, which we invite you to read in this article.

Should I add an exhaust fan at the top?

Installing an exhaust fan at the top of the enclosure cabinet can improve air flow. Keep in mind that most blowers have a filter at the air inlet side to prevent dust and lint from entering the cabinet. When selecting fans or blowers, pay attention to noise ratings.

Does an open base cabinet waste a lot of cooling air?

An open-base cabinet sitting only one-quarter inch off the floor can waste a substantial percentage of cooling air even if the air is directed upward initially. A properly planned air path will avoid all "short circuits" or losses by forcing the cool supply air to pass through the components that are to be cooled before reaching the exhaust area.

Can a thermostat control a fan?

To optimize fan operation and control consumption, it's possible to install a thermostat inside the electrical enclosure to operate the filter unit only when the temperature is too high. Using a thermostat could increase the fan life up to 50% and reduce the frequency of filter mats replacement.
