

How to use photovoltaic panels to supply electricity

What is a solar electric or photovoltaic (PV) system?

A solar electric or photovoltaic (PV) system is a system that can reliably produce electricity for your home or office. These small or distributed solar systems are often installed by home or business owners to offset their electricity costs.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted)

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.

Why do solar panels work?

By adding electricity to the grid with your solar panels, you reduce the peaks of that curve because people can use the energy you generated without the utility companies ramping up their power plants to meet consumer demand.

Can solar panels be fed to the electric grid?

While energy from solar panels can be fed to the electric grid to support clean power and reliable delivery, the current grid configuration needs some improvement for the two distribution infrastructures to work seamlessly together.

What is a photovoltaic system?

Photovoltaic or PV systems are leading this revolution by utilizing the available power of the sun and transforming it from DC to AC power.

Here's a step-by-step overview of how home solar power works: When sunlight hits a solar panel, an electric charge is created through the photovoltaic effect or PV effect (more on that below); The solar panel feeds this electric charge into ...

Solar cell efficiency represents how much of the incoming solar energy is converted into electrical energy: $E = (P_{out} / P_{in}) * 100$. Where: E = Solar cell efficiency (%) P_{out} = Power output (W) P_{in} = Incident solar power (W) If a ...
