

# Hydrogen energy storage container manufacturers

How does hydrogen storage work?

As hydrogen pioneers, we develop the safest hydrogen storage systems and help customers around the world achieve their climate goals. Green energy from wind, water and the sun is converted into hydrogen, the hydrogen molecules flow into the centre and are solidly absorbed in the metal lattice.

What is liquid hydrogen storage?

The cryogenic technology involved utilizes safe, low pressure, double wall systems and is proven reliable over many decades and across multiple applications, including aerospace, industry, science and research. Liquid hydrogen storage eliminates high pressure cylinders and tanks and is a more compact and energy dense solution than gaseous storage.

What is a hydrogen energy industry chain?

Within the hydrogen energy industry chain, mainly includes hydrogen production, storage, transportation and application, among which storage and transportation are key to ensuring the safe and efficient use, and large-scale commercialization of hydrogen energy.

What is the future of hydrogen energy storage & transportation equipment?

In the future, as hydrogen energy production and application continue to scale up, the geographical disparity between supply and demand will significantly drive the market demand for hydrogen energy storage and transportation equipment.

Who is GKN hydrogen?

GKN Hydrogen is a pioneering company in hydrogen storage and power-to-power solutions. They specialize in creating robust, safe, and economical hydrogen storage systems using metal hydride technology.

What are the challenges facing hydrogen storage systems today?

Today working pressures up to 1000 bar poses new challenges in terms of performance and safety of hydrogen storage systems. We leveraged on our deep metallurgical and engineering experience to develop a tailor-made technology able to withstand the embrittlement effect and ensure a long-lasting solution.

We are developing a compact hydrogen storage system that is safer and lighter than commercially available pressure tanks. Our solution increases flight time up to 3x longer than typical Li-ion batteries - a factor that affects all drone users.

The 40-foot liquid hydrogen tank container provides an optimal solution for large-scale, long-distance multimodal hydrogen energy transportation. Looking forward, CIMC Enric will comprehensively strengthen its efforts in the ...
