

# Illustration of the installation method of the third generation photovoltaic panels

Can a window-integrated solar PV system be used with a third-generation solar panel?

In comparison, this study estimated that the SIR 20 of the window-integrated PV system equipped with the third-generation solar PV panel increased from a minimum of 1.02 to a maximum of 1.88. That is, it is still economically reasonable to apply the first-generation solar PV panel.

#### Can a third-generation solar PV panel be competitive?

However, the efficiency of the third-generation solar PV panel can still be improved, and since it is installed by attaching it to the window, it can be considered competitive because it does not occupy the usable area of the building. The results of this study have the following contributions in academic and social aspects.

#### Which building blocks can integrate third-generation PV technologies?

The transparent components of buildings and facadesare the most suitable building blocks that can easily integrate third-generation PV technologies. Extensive surfaces (especially in high-rise buildings) allow better exposure to the Sun and easily integrate with wiring and other electrical equipment.

#### Are third-generation solar cells suitable for building integration?

Herein, the current state of the technology of third-generation cells and the study of building integration have been reviewed. Important issues on the integration of solar cells with buildings are considered under three categories of transparency, colour and energy-saving. The main conclusions of the present study can be listed as follows:

## How can third-generation photovoltaic panels reduce energy consumption?

Reduction of energy consumption due to the use of third-generation photovoltaic panels is achieved by changing the material structure. But integrating them with buildings requires an acceptable form,type of light-transmitting facade and the orientation of the building.

## What is integrated photovoltaic (BIPV) technology?

Content may be subject to copyright. The three generations of solar photovoltaic (PV) cells. Building integrated photovoltaic (BIPV) technology provides an aesthetical, economic, and technical solution for electricity self-sufficiency in buildings.
