

What is energy infrastructure in an industrial park?

The energy infrastructure in an industrial park is defined as shareable utilities that are located within the park and provide energy for the park, e.g., heat and electricity [31]. Climate change mitigation requires decoupling energy services and GHG emissions.

What was energy infrastructure like in 1604 industrial parks?

Firstly, a high-resolution geodatabase of energy infrastructure in 1604 industrial parks was established. These energy infrastructures largely featured heavy coal dependence, small capacities, cogeneration of heat and power, and were young in age.

Why is shared energy infrastructure important in industrial parks?

Shareable energy infrastructure is universally used in industrial parks and generally has a long service lifetime [27,28,29]; thus, the GHG emissions from industrial parks are locked in. Efficient, resilient, and sustainable infrastructure is a crucial pathway to greening industrialization [30].

Does energy infrastructure decarbonize industrial parks?

In existing studies, GHG mitigation of industrial parks and energy infrastructure have been mostly analyzed separately, and very few studies emphasized energy infrastructure decarbonization at the industrial park level [31].

What is the energy infrastructure in Chinese industrial parks?

The geodatabase of energy infrastructure in 1604 Chinese industrial parks covered 2127 plants, including 4706 units. Fig. 1 illustrates the overview of energy infrastructure in the parks by the end of 2014, from the perspective of stock evolution, fuel structure, and capacity structure.

What is the energy structure adjustment for a National Demonstration Eco-Industrial Park?

As for energy structure adjustment, a 2% reduction in 2017-2020 and a 6% reduction of energy intensity in 2020-2030 were set with reference to the Standard for National Demonstration Eco-industrial Parks (HJ 274-2015) (MEC, 2015).

The model for the industrial park's solar energy storage system integrates restrictions like budget constraints, grid transmission power constraints, power balance constraints, energy storage limitations, electricity price restrictions, ...
