

Is it suitable to grow garlic under photovoltaic panels

Can agrivoltaic plants be grown under solar panels?

Plants considered intolerant to shading could be grown under solar panels under certain conditions. Benefits of agrivoltaics are also linked to reduced water consumption, improved crop protection and increased animal welfare. Increased global demand for food and energy implies higher competition for agricultural land.

Can farmers grow crops under agrivoltaics?

With agrivoltaics, farmers can reduce water consumption, produce renewable energy, and continue to cultivate their land. However, there is skepticism toward growing crops under solar panels, as farmers may have to change the types of plants that are more shade tolerant.

Can Broccoli grow under photovoltaic panels?

Researchers in South Korea have been growing broccoli underneath photovoltaic panels. The panels are positioned 2-3 metres off the ground and sit at an angle of 30 degrees, providing shade and offering crops protection from the weather.

Can agrivoltaics improve crop yield?

Impact on yield is highly variable between crop and geographical location. Plants considered intolerant to shading could be grown under solar panels under certain conditions. Benefits of agrivoltaics are also linked to reduced water consumption, improved crop protection and increased animal welfare.

Should agrivoltaics be limited to the types of crops people eat?

Barron-Gafford also points out that agrivoltaics need not be limited to the kinds of crops people eat. A farmer might let native grasses grow wild under the panels, providing food for livestock, which would also benefit from the shade. Or they might promote the growth of plants for native pollinators like bees.

Is potato a suitable plant for agrivoltaics?

The same trends were observed by Ref. , suggesting that the potato is a suitable plant for agrivoltaics. An increase in sweet pepper (*Capsicum annuum* L.) production and number of fruits per plant was also observed in crops grown under a solar array, without affecting the quality of the production [65,66].
