

Jiang Solar Power Generation Glass

What is power generating glass?

Power-generating glass has low reflectivity and does not cause light pollution. It can be used not only in large-scale solar power plants but also as a replacement for traditional building materials in various buildings, providing clean energy from the sun.

What is a building-integrated photovoltaic smart window?

Photovoltaic smart window is an efficient way to improve efficiency of the window. In this work, we proposed a building-integrated photovoltaic (BIPV) smart window with energy modulation, energy generation, and low emissivity function by combining perovskite solar cell and hydrogel.

How much electricity is generated by power generation glass?

And the daily power generation of power generation glass accounts for 20% of the park's electricity consumption. According to calculations, the power generation glass in the park can generate 1.4 million kWh of electricity per year, and can save about 800,000 yuan in electricity bills annually based on the current electricity price.

What time does power generation glass generate electricity?

The entire roof of the factory building is designed in a zigzag and wave shape, and power generation glass is used to construct the three south-facing roofs. According to the data from the smart energy management system, the power generation glass starts to generate electricity at 6:40 a.m. and continues to generate electricity until 7:30 p.m.

How much does power-generating glass cost?

From the current situation, the conditions for household use of power-generating glass are already in place, but cost is a factor that must be considered. According to Pan Jingong, the company's power-generating glass costs about 1,000 yuan per square meter.

What type of glass is used in Chuan kai Electric Industrial Park?

The factory building of Chuan Kai Electric Industrial Park in Shuangliu District, Chengdu, is equipped with this type of power generation glass. The entire roof of the factory building is designed in a zigzag and wave shape, and power generation glass is used to construct the three south-facing roofs.
