

Kubota Factory Solar Power Generation

How will Kubota save energy?

We will continue to implement measures to save energy on production equipment and air-conditioning/lighting, as well as promote measures to reduce waste and loss in the use of energy based on the concept of the Kubota Production System (KPS) and expand the use of renewable energy.

How will Kubota increase its production capacity?

Kubota will increase its annual production capabilities from 48,000 to 78,000 units by constructing a new building to handle painting assembly, and other manufacturing processes.

How does Kubota achieve the environmental vision?

In terms of the orientation for its efforts to realize the Environmental Vision, Kubota has put forward "reducing CO₂ emissions from the Kubota Group" based on emissions throughout entire product life cycles, and "reducing CO₂ emissions from society" through new solutions and other means.

What will Kubota do in the future?

In the future, Kubota anticipates this growth in demand to continue primarily in Europe and North America. To respond to this high demand, Kubota will increase its annual production capabilities from 48,000 to 78,000 units by facility a new building at its Hirakata Plant, which is its main mini excavator manufacturing facility.

How does Kubota contribute to a sustainable society?

Through reducing environmental burdens and risks in our corporate activities, Kubota contributes to developing a sustainable society and preserving the global environment.

What is Kubota smart Agri system (KSAS)?

The first is Kubota's efforts to advance smart agriculture using ICT and AI. These are represented by the KUBOTA Smart Agri System (KSAS), a support system for farm management that improves work efficiency through the use of robotics and IoT in agricultural machinery, thereby achieving savings in energy and resources.

Before we check out the calculator, solved examples, and the table, let's have a look at all 3 key factors that help us to accurately estimate the solar panel output: 1. Power Rating (Wattage Of Solar Panels; 100W, 300W, etc) The first factor ...
