

Latest policy on photovoltaic solar power generation

How does policy support affect solar PV deployment?

Policy support remains a principal driver of solar PV deployment in the majority of the world. Various types of policy are behind the capacity growth, including auctions, feed-in tariffs, net-metering and contracts for difference.

Will solar PV be the future of electricity?

In the REmap analysis 100% electricity access is foreseen by 2030, in line with the Sustainable Development Goals, and solar PV would be the major contributor to this achievement. Costs are expected to reduce further, outpacing fossil fuels by 2020 (IRENA, 2019f).

Is solar PV a competitive source of new power generation capacity?

Solar PV is emerging as one of the most competitive sources of new power generation capacity after a decade of dramatic cost declines. A decline of 74% in total installed costs was observed between 2010 and 2018 (Figure 10).

Will solar power cover a quarter of global electricity needs?

Solar PV could cover a quarter of global electricity needs by mid-century, becoming the second largest generation source after wind. Global capacity must reach 18 times current levels, or more than 8 000 gigawatts by 2050.

How many GW will solar PV produce in 2024?

The current manufacturing capacity under construction indicates that the global supply of solar PV will reach 1 100 GW at the end of 2024, with potential output expected to be three times the current forecast for demand.

How many GW DC of photovoltaics are installed in 2023?

The International Energy Agency (IEA) reported that in 2023, 407-446 gigawatts direct current (GW dc) of photovoltaics (PV) was installed globally, bringing cumulative PV installs to 1.6 terawatts direct current (TW dc). China continues to dominate the global market, representing ~60% of 2023 installs, up 120% year-over-year (y/y).

In 2023, an estimated 96% of newly installed, utility-scale solar PV and onshore wind capacity had lower generation costs than new coal and natural gas plants. In addition, three-quarters of new wind and solar PV plants offered cheaper ...
