

Layout of photovoltaic panels for fishery-solar complementary

Do fishery complementary photovoltaic power plants affect meteorology and surface energy?

Therefore, solar power plants are rapidly developing in the renewable energy sector. However, many reports of solar power plants are on land, and extremely limited observational research has been conducted on the impacts of fishery complementary photovoltaic power plants (FPVs) on near-surface meteorology and surface energy.

What are the coordinates of the fishery complementary photovoltaic demonstration base?

The central coordinates of study area 32°17'55" N, 119°47'39" E, and the altitude is 2 m. The fishery complementary photovoltaic demonstration base is composed of four ponds of 5.7-8.9 acre. The FPV is located on the central the pond with about the water depth from 2.5 m to 3 m.

Why is temperature difference important in fishery complementary PV power plant?

The difference in temperature in various water layers benefits the cultivation of different fish in the fishery complementary PV power plant. Fig. 6.

Where is fishery complementary FPV located?

The model base of the fishery complementary FPV is located in northern Yangzhong, Jiangsu, China. This city has a mean annual temperature of 17.1 °C. The mean annual precipitation and the accumulated sunshine hours are 791.8 mm and 1792.2 h, respectively.

Does PV power generation affect energy balance closure in FPV power plant?

The period of robust power generation of the FPV power plant was selected to analyse the energy balance closure. We attempted to reveal the impact of the PV power generation process on the degree of energy balance closure by comparing the EBR inside and outside the FPV power plant. The EBRs at different time spans are shown in Table 2.

How FPV power plant affect solar radiation and energy balance?

Solar radiation and energy balance in local area were affected by the deployment of FPV power plant. It is well-known that the lake-atmosphere interaction is dominated by the balance of both radiation and energy. The change of radiation and energy balance further conducted on local synoptic condition.
