

# Lifespan of wind turbine generator sets

How long do wind turbines last?

The average age of wind turbines in the United States in 2020 is 7 years with an estimated 11 years by 2025 . Performance of wind turbines greatly decreases with age, about 16% per decade or 1.6% each year . This degradation reduces the wind farm's output by 12% over a 20-year life and increases the cost of levelized electricity by 9% .

What factors determine a wind turbine's life?

What Factors Determine a Wind Turbine's Life? Modern wind turbines are designed to last 20 years and with proper monitoring and preventative maintenance two to three times per year (increasing with frequency as the turbine ages) their lifetime can be extended to 25 years .

How can the lifecycle of a wind turbine be extended?

The lifecycle of a turbine can be extended through careful monitoring and maintenance. This requires the condition of the asset to be assessed and compared with the expended lifespan of the turbine, based upon the expected loads and fatigue as well as environmental factors for the wind energy site.

What percentage of wind turbines are older than 15 years?

In 2016, 12% of the installed wind turbine capacity in Europe was older than 15 years. This share increases to 28% by 2020 . These wind turbines will soon reach the end of their designed service life, which is typically 20 years.

Do wind turbines need a lifetime extension?

A significant number of wind turbines will reach the end of their planned service life in the near future. A decision on lifetime extension is complex and experiences to date are limited. This review presents the current state-of-the-art for lifetime extension of onshore wind turbines in Germany, Spain, Denmark, and the UK.

How long should a wind turbine foundation last?

partially or fully collapsing and being rendered inoperable. Therefore, it is recommended that the condition and integrity of wind turbine foundations is continually assessed during service and prior to LTE to avoid unexpected issues developing. When designing WTG foundations, a design lifetime of 20 to 25 years is generally a

How Long do Wind Turbines Last? A good quality, modern wind turbine will generally last for 20 years, although this can be extended to 25 years or longer depending on environmental factors and the correct maintenance procedures ...
