What is the bottom-up cost model for battery energy storage systems?

Current costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Feldman et al.,2021). The bottom-up BESS model accounts for major components,including the LIB pack,inverter,and the balance of system (BOS) needed for the installation.

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al.,2021). The bottom-up BESS model accounts for major components,including the LIB pack,inverter,and the balance of system (BOS) needed for the installation.

How will battery overproduction and overcapacity affect the energy storage industry?

Battery overproduction and overcapacity will shape market dynamics of the energy storage sector in 2024,pressuring prices and providing headwinds for stationary energy storage deployments. This report highlights the most noteworthy developments we expect in the energy storage industry this year.

Which long-duration energy storage technologies are gaining traction?

Both prismatic LFP cells in stationary storage and large cylindrical cells for EVs are gaining traction,taking away market share from pouch cells. Beyond lithium-ion batteries,other long-duration energy storage (LDES) technologies have a critical year ahead.
