

# Microgrid installed capacity regulations

Will a microgrid be regulated?

A microgrid developed with private funding to support community resilience, serve local load and potentially also seek value through service provision to the local utility or wholesale market. Such microgrids will likely be subject to a regulated bi-directional utility tariff approved by a regulator.

What is a microgrid system?

Microgrids are electricity distribution systems containing loads and distributed energy resources (such as distributed generators, storage devices, or controllable loads,) that can be operated in a controlled, coordinated way either while connected to the main power network or while islanded.

Are microgrids a potential for a modernized electric infrastructure?

1. Introduction Electricity distribution networks globally are undergoing a transformation, driven by the emergence of new distributed energy resources (DERs), including microgrids (MGs). The MG is a promising potential for a modernized electric infrastructure .,

How many customers can a microgrid supply?

First, the maximum number of customers a microgrid can supply varies greatly by state with Iowa on the lower bound of 5 and Minnesota on the upper bound of 25. Second, the relative location of generation and loads within a microgrid is currently limited to 1 mile for QF.

Are Microgrid developers subject to the same regulatory requirements as public utilities?

If microgrid developers are subject to the exact same regulatory requirements as public utilities, this could potentially result in significant regulatory burdens on many private companies offering microgrids services (NREL 2020).

How do regulatory environments impact microgrids?

Regulatory environments that enable a range of enabling business models across microgrid use cases will be critical in realizing the market potential of microgrids.

The first step when developing a microgrid policy or program should be to define several key terms including microgrid, hybrid/multi-customer microgrid, and mobile microgrid. This can be done through legislation, regulation, a state ...
