

Midea solar panel maintenance

What is a Midea energy storage unit (Mesu)?

The Midea Energy Storage Unit (MESU) product can store excess solar energy to power your house 24 hours without worrying about power outages. Parallel design avoids the barrel effect of short board batteries and improves usable capacity. Electrical isolation and BMS protection functions ensure battery safety.

Do solar panels need maintenance?

Solar panels generally require very little maintenance in order to function, so yes, you can usually just let them be. The only thing most solar panels need is a periodic light cleaning to make sure dirt, leaves, and other debris aren't obstructing the sun's rays.

Are solar panels durable?

Solar panels are designed to be durable. Top-quality solar panel installations allow PV systems to withstand all kinds of weather, from wind and rain to snow and more. You'll be glad to know that solar panels hold up well against hail, as found by the Department of Energy.

Can a solar panel be repaired or replaced?

But as long as you have a good warranty, you should be able to have any damaged panels repaired or replaced. Somewhat ironically, the type of weather that most commonly affects panels is heat. When the temperature gets over 77°F (or 25°C), panels lose efficiency approximately 1% per degree.
