

# Military multifunctional solar power generation

What are the benefits of solar power for Camp Arifjan?

The core benefit lies in energy security. The solar energy produced by this system, combined with battery and generator plant backups, can support Camp Arifjan's mission-critical operations during emergencies and outages, reducing reliance on the host nation's grid. This independence strengthens operational security and ensures mission continuity.

Are military generators more efficient?

Military generators have standard sizes, but battery power and energy ratings are more flexible. Figure 6 shows the impact of varying ESS energy capacity on fuel consumption in the improved AC microgrid. Since the batteries do not have 100 percent efficiency, there are losses in each charge and discharge cycle.

Why is the Army partnering with utility companies?

"Our partnerships with utility companies are essential to delivering energy resilience for the Army," said Rachel Jacobson, Assistant Secretary of the Army for Installations, Energy, and Environment. "These partnerships are helping us put microgrids with carbon-free energy generation and storage on our installations.

How can the army support the energy demands of emerging technologies?

Supporting the energy demands of these emerging technologies requires a significant modernization and development of the U.S. Army's microgrids. A microgrid is an independent energy system, which at a minimum consists of electrical generation and distribution assets.

Will Duke Energy power military installations in North and South Carolina?

The Department of Defense (DoD) announced at Fort Liberty today, a first-of-its-kind partnership with Duke Energy to power five military installations in North and South Carolina with carbon-free electricity. As part of this agreement, DoD will be the exclusive purchaser of all output generated by two new solar facilities in South Carolina.

Can military forces reduce reliance on conventional fuel supplies?

The level of innovation displayed in alternative power generation and smarter energy solutions currently available or under development is good news for military forces looking to reduce their reliance on conventional fuel supplies.
