

Concentrated solar power (CSP, also known as concentrating solar power, concentrated solar thermal) systems generate solar power by using mirrors or lenses to concentrate a large area of sunlight into a receiver. Electricity is generated when the concentrated light is converted to heat (solar thermal energy), which drives a heat engine (usually a steam turbine) connected to an ...

A solar concentrator is a device designed to focus and concentrate solar radiation, and its application can be both in the generation of solar thermal energy and in the generation of solar photovoltaic energy. Its operation is based on ...
