

New energy storage fire extinguishing device

Does a fire extinguishing device cause a thermal runaway in battery box?

(4) It is evident that the cubic temperature curve that the fire extinguishing device under high or low temperature conditions has little effect on the internal temperature field of the battery that occurred thermal runaway in battery box.

Can evfe be used for continuous fire extinguishment?

The level of agents in EVFE was high enough to overwhelm battery packs in the EV to achieve the effect of continuous fire extinguishment. Water and compressed air foam (CAF) were selected as the filling media for EVFE. After the fire was extinguished, the extinguishing agent was emptied by dismantling EVFE.

What is a fire extinguishing device?

Fire extinguishing device refers to the equipment that sprays the internal fire extinguishing agent under the action of the internal pressure of the equipment to achieve a good fire extinguishing effect.

Should lithium-ion battery fire extinguishing agent be developed?

Therefore, based on this article, it is worth developing a new type of lithium-ion battery fire extinguishing agent that improves this fire extinguishing agent to have both good fire extinguishing effect and cooling performance. Gang Zhou: Supervision, Project administration, Funding acquisition, Conceptualization.

How does evfe fire extinguisher work?

In the filling and cooling stage, firefighters use fire hose nozzles to extinguish the passenger compartment fire. After controlling the carriage fire, the fire extinguishing agent is injected into EVFE as a filling medium until the agent overwhelms the battery pack.

Can a cutting extinguisher be used in a lithium-ion battery fire?

Cold Cut Systems used a cutting extinguisher (Standard Cobra lance) in the pilot study with good results. It was determined there was enough evidence to motivate further studies and tests to develop guidelines for offensive extinguishing efforts of lithium-ion battery fires. This demonstration is an activity within the scope of this work.

Upon activation, the condensed aerosol forming compound transforms from a solid state into a rapidly expanding two-phased fire suppression agent; consisting of Potassium Carbonate solid particles K_2CO_3 (the active agent) suspended ...
