

New technology of solar panel power generation

MIT researchers developed a scalable fabrication technique to produce ultrathin, flexible, durable, lightweight solar cells that can be stuck to any surface. Glued to high-strength fabric, the solar cells are only one-hundredth ...

The benefits of covering those canals with solar panels would result not only in huge amounts of new power generation, but also a major reduction in evaporation in drought-prone areas. ... Researchers are still studying new breakthroughs ...
