

Paste photovoltaic panels

Why do photovoltaic panels use silver paste on the back side?

The silver paste on the back side mainly plays the role of adhesion, and is mostly used on the backlit side of P-type cells. Therefore, the silver paste on the front side of photovoltaic panels requires a higher level of production process and electrical conductivity.

What are the advantages of photovoltaic silver paste?

Good adhesion: photovoltaic silver paste can be firmly attached to the surface of the silicon wafer to ensure the reliability of the electrical connection. Anti-aging properties: after careful design, the photovoltaic silver paste can be used in the long-term to maintain stable electrical properties that are not easily affected by the environment.

Why should you choose DuPont photovoltaic solutions?

That all changed when DuPont Photovoltaic Solutions stepped in. We provided a solar solution that not only brought the people of Ladakh reliable, cost-effective, and safe energy, but it will also stand up to the area's harsh climate all year round for many years to come. China is facing a critical moment in its energy future.

Photovoltaic silver paste can be divided into silver paste on the front side of the photovoltaic panel and silver paste on the back side according to the location of the silver paste. The main role of silver paste on the front side is to collect and ...
