

# Photovoltaic aluminum bracket assembly drawing

What is the design phase of a Solar Roof mounting system?

The design phase of a solar roof mounting system is where technical expertise truly shines. It involves: Site Assessment: A thorough analysis of the installation site is critical. This includes evaluating the roof's condition, orientation, and any potential shading from nearby structures or vegetation.

How framed PV modules can be installed on a trapezoidal metal sheet roof?

rainless system facilitates the rapid mounting of framed PV modules on trapezoidal metal sheet roofs with minimum thickness 0.8 mm. Only three components are required to install the modules directly to the roof. A base mounting clip is 100 mm or 140 mm long, therefore easy to carry and attach to almost all trapezoidal and sandwich roofs.

What ancillaries can I attach to my PV array?

From service walkways to conduit, wire trays, optimizers, other MLPEs and monitoring equipment, you can use S-5! clamps, brackets and GRIPPERFIX <sup>®</sup>; universal utility mounting system to securely attach the above ancillaries to your PV array.

How do you install a PV array on a roof?

Note: the PV array should not be installed closer than 500mm to the perimeter of the roof including ridge line and eaves (unless verified by a professional engineer). Attach the clamp and tighten the screw to 16 N.m using a 5mm Allen key or drill bit to roof per as planned plan position.

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

What materials are used for mounting base brackets?

Mounting base brackets are fabricated from Series 6000 structural marine grade aluminum. 5/16" hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum and include a vertical slot for adjusting to irregular surfaces. 5/16" coated hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum.

Sun-Age designs and produces the most efficient fixing systems for structure on tile roofs, such as the innovative BEE33 UNIVERSAL BRACKET which saves costs and installation times on most tile roofs! We provide ready-to-deliver kits ...
