

Why should you choose Daelim transformers for photovoltaic power plants?

With this experience, Daelim offers transformers for photovoltaic power plants with large capacities, many low-voltage branches, high temperature limits, compactness, high secondary integration and ease of installation and use, which are used in a large number of applications in the photovoltaic power generation sector.

Why is sizing a transformer important for a PV power plant?

Transformers need to withstand high temperatures as harsh weather conditions. Sizing of these transformers is a crucial factor when planning a PV power plant, as too large rated power can lead to instabilities and economic disadvantages as well as too small transfo

Are photovoltaic power plants grid-connected?

The majority of PV plants are currently grid-connected, i.e. connected in parallel to the existing power supply network to maximise the use of the electricity generated by the plant. Inverters and transformers used in photovoltaic power stations are one of the important nuclear components of photovoltaic power stations.

What are inverters and transformers used in photovoltaic power stations?

Inverters and transformers used in photovoltaic power stations are one of the important nuclear components of photovoltaic power stations. Inverters realise the conversion from DC to AC, and transformers realise the transmission and utilisation of electrical energy.

Which Transformer products are used in PV box-type substations?

The rapid development of the photovoltaic industry has brought many opportunities for PV box-type substation manufacturers in particular. The transformer products currently used in PV substations are mainly oil-immersed transformers, which have the advantages of simple structure, strong shock resistance and high reliability.

What is a photovoltaic power plant?

Power transformers are in service all around the world for decades. We offer reliable and established for state-of-the-art energy production. Photovoltaic power plants Photovoltaics (PV) use solar cells bundled in solar panels to produce DC-current. Depending on the design of the photovoltaic plant several panels are connected
