

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

Why do PV modules have a large settlement?

The large settlement of the PV modules due to self-weight and static wind load always affects architectural aesthetics and reduces the power generation efficiency because it changes the light angle. Reducing the settlement requires a large pretension and cable diameter to ensure the safety of the structure.

How stiff is a tracking photovoltaic support system?

Because the support structure of the tracking photovoltaic support system has a long extension length and the components are D-shaped hollow steel pipes, the overall stiffness of the structure was found to be low, and the first three natural frequencies were between 2.934 and 4.921.

What is a new cable-supported photovoltaic system?

A new cable-supported photovoltaic system is proposed. Long span, light weight, strong load capacity, and adaptability to complex terrains. The nonlinear stiffness of the new cable-supported photovoltaic system is revealed. The failure mode of the new structure is discussed in detail.

How does a cable-supported PV system change structural parameters?

Parametric analyses The new cable-supported PV system often changes structural parameters to adapt to different geographic environments, such as changing the row spacing to obtain different amounts of daylight or enlarging the cable diameter to enhance the bearing capacity of the structure.

What is the inflection point of a cable-supported PV system?

When the upward vertical displacement is less than 0.0639 m, the force first counteracts the self-weight of the cables and PV modules. Therefore, there is an inflection point at 0.0639 m. For the new cable-supported PV system, the lateral stiffness is much higher than the vertical stiffness.
