

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

What rack configurations are used in photovoltaic plants?

The most used rack configurations in photovoltaic plants are the 2 V  $\times$  12 configuration (2 vertically modules in each row and 12 modules per row) and the 3 V  $\times$  8 configuration (3 vertically consecutive modules in each row and 8 modules per row). Codes and standards have been used for the structural analysis of these rack configurations.

Does a ground-mounted photovoltaic power plant have a fixed tilt angle?

A ground-mounted photovoltaic power plant comprises a large number of components such as: photovoltaic modules, mounting systems, inverters, power transformer. Therefore its optimization may have different approaches. In this paper, the mounting system with a fixed tilt angle has been studied.

How to optimize a photovoltaic plant?

The optimization process is considered to maximize the amount of energy absorbed by the photovoltaic plant using a packing algorithm (in Mathematica(TM) software). This packing algorithm calculates the shading between photovoltaic modules. This methodology can be applied to any photovoltaic plant.

Which photovoltaic plant has a fixed tilt angle?

The described methodology has been applied in Sigena I photovoltaic plant with a fixed tilt angle, 2 V  $\times$  12 configuration with a tilt angle of 30 ( $^{\circ}$ ), located in Northeast of Spain (Villanueva de Sigena). From a quantitative point of view, the following conclusions have been reached:

Can geospatial data be used for photovoltaic plants?

A geospatial analysis of satellite imagery of plot areas has been used for the determination of the available land areas for the installation of photovoltaic plants. An open-source geographic information system software, QGIS, has been used. This software permits the conversion, visualization and analysis of geospatial data.
