

What are the components of a photovoltaic system?

It discusses the components of a photovoltaic system including solar arrays, mounting systems, inverters, and batteries. It also describes different types of solar cell technologies like thin film and crystalline silicon, and provides background on the growth of photovoltaics over time in India and worldwide.

What topics are covered in a solar panel installation course?

The topics include solar panels, solar inverters, batteries for solar PV systems, racking of solar panels, PV system design guidelines, PV system installation guide, and testing and troubleshooting.

What are the disadvantages of solar photovoltaic (PV)?

Disadvantages of Solar photovoltaic (PV) A large area of unshaded south, south-west or south-east facing roof is required to maximise payback. Smaller systems can be installed but payback will be longer. Panels degrade over time by approximately 20% over 25 years; this however is taken into account in most reputable suppliers calculations.
