

# Photovoltaic bracket on-site acceptance process

What is solar PV acceptance?

The process of solar PV acceptance ensures that photovoltaic systems are safe for operation, can remain compliant with environmental and planning requirements, meet design and performance objectives, and that any tests meet contractual requirements.

What does acceptance mean for a solar system?

Acceptance is a critical part of the solar system development process for any PV system owner. Before the handover to commercial operations can begin, solar systems must pass a set of acceptance and performance tests conducted by the Engineering, Procurement and Construction (EPC) contractor.

What are the stages of solar PV acceptance?

Solar PV acceptance requires more than a single step due to the complexity of the projects. In the European market, acceptance involves three key stages: provisional acceptance (PAC), intermediate acceptance (IAC) and final acceptance (FAC).

Is a photovoltaic system failproof?

Despite great engineering, no system is failproof. That's where commissioning comes in, establishing a baseline of performance for customer acceptance and follow-on maintenance. Commissioning is important not only for photovoltaic (PV) system performance, but also for longevity of equipment, safety, ROI, and warranties.

Do PV system commissioning standards require performance testing?

This best practice guide is PV System Commissioning or re-Commissioning Guide Supplement to characterize and maximize PV system performance. If a PV system is commissioned using industry standards, then it should produce as much energy as was expected, right? No, PV industry commissioning standards do not call for performance testing.

Why is commissioning a PV system important?

Commissioning is important not only for photovoltaic (PV) system performance, but also for longevity of equipment, safety, ROI, and warranties. PV system site survey using the Fluke irradiance meter with mounting bracket to validate panel performance.

2? The application of CHIKO Solar Energy in the field of photovoltaic brackets. CHIKO Solar is a world leading manufacturer of solar brackets, headquartered in Shanghai and established in 2010. It has a production scale of 1000MW ...
