

Photovoltaic color steel tile bracket column spacing

What rafters should be used for roof interface spacing?

Please verify rafter properties of building, which could affect the interface spacing. Timber Rafters: Tile Roof interface spacing tables are based on a minimum depth into F7 (Pine) timber of 25mm. Metal Rafters: Tile Roof interface spacing tables are based on 1.9mm thick Steel Purlins G450 or equivalent.

How do I install a solar stack roof?

Surface Preparation. All roof surfaces must be free of any debris, dirt, grease, oil, and standing water before adhesive is applied. Follow adhesive manufacturers application instructions. Tile roofs: Tiles must be cut to the proper size of the Solar stack pedestal (+/- 1"). Clean the hole of any sawdust with appropriate tools and materials.

Do I need a primer before installing solar stack pedestals?

Before foam adhesive and Solar Stack pedestals are installed to the roof, "primer" coating must be applied for stronger bond between the TPO roof and foam adhesive. Appropriate "primer" must be determined with the roof manufacturer to avoid warranty issues. Determine the spacing of Solar Stack pedestals for your solar array design.

How do I connect a solar tiled roof to an inverter?

Table 1. Batten step and Solar Tiled Roof™ compatibility table ? Bring the earth wire down to the inverter. From the inverter the grounding wire is connected to the electrical panel, which leads the grounding wire to the ground. ? Earth wire is connected to each next module. Cable is brought to the next module from under the upper batten.

What are the components of a solar stack pedestal system?

The system is a non-separately derived system. The following components have been evaluated for bonding as the fault current ground path: PV module, Mid Clamp, End Clamp, Pedestal and Ground Lugs. Solar Stack pedestals can be installed on BUR (Build Up Roofs), Mineral surface (Modified Bitumen), EPDM, PVC, TPO, Hypalon and Concrete roofs.

How do I connect a solar stack module to a pedestal?

Modules should be bonded to the Solar Stack pedestals with the manufacturer approved middle/end clamps. Grounding hardware (as a part of the module clamps) forms secure electrical bonds with both the module and the pedestal, resulting in many parallel grounding paths throughout the system.
