

# Photovoltaic combiner box fire protection project

Does a rooftop grid-connected PV system have fire safety practices?

Hence, this paper aims to evaluate, review, and facilitate knowledge exchange on fire safety practices, particularly during the design consideration and installation stages of the rooftop grid-connected PV system without batteries from established PV installation guidelines available in the public domain.

Are fire safety practices included in PV installation guidelines?

Assessed elements in PV installation guidelines. In general, all publications mention fire safety practices during installing PV systems either directly or indirectly.

Should fire personnel disconnect PV installations from mains electricity?

5.14.7 Fire personnel should disconnect PV installations from the mains electricity at the intake to render the AC side of the installation voltage-free, and operate the 'fire service switch' if installed.

Does installing a new PV system affect fire resistance?

Even so, installing a new system on the roof will still affect the fire resistance and alter the fire dynamic of the building. The quantitative analysis of rooftop PV fires conducted by Mohd Nizam Ong et al. (2021) had established an annual PV fire incident frequency of 0.029 fires per MW, with PV connector being the prime contributor.

How to protect PV panels & unprotected cables from fire?

Ensure PV panels and unprotected cables are not laid over a fire compartment wall to prevent the fire spread. If the situation is unavoidable, it is necessary to protect cables using fire resistance cable ducts (RISCA Authority & Fire Protection Association, 2016). 3.6.6.

Are exposed metallic framed PV systems vulnerable to lightning strikes?

Changing climatic conditions, with increased humidity and more frequent lightning storms predicted, make exposed metallic framed PV systems vulnerable to lightning strikes. The IET PV Code of Practice outlines the requirements for lightning protection and should be followed.

Electrical shocks are typically caused by a short circuit resulting from corroded cables and connections, loose wiring, and improper grounding. Key places to look for these conditions in a PV system include the combiner box, PV source and ...
