

Battery capacity is a measure of the total energy needed to charge the batteries, or the total energy available when they are fully charged. If the total battery capacity is 1800Wh (Watt-hours), then, in theory, you can use an 1800W ...

34. Battery Capacity Calculation. This is the required battery capacity to meet your energy storage needs:  $B_c = (E_l * N_d) / DOD$ . Where:  $B_c$  = Battery capacity (Ah)  $E_l$  = Energy load per day (kWh)  $N_d$  = Number of autonomy days; DOD = ...
