

Can a microgrid be optimized with hybrid energy sources?

As this study only considers solar PV as the source of energy, future study should investigate the optimization of a microgrid with hybrid energy sources and catering for hydrogen and electrical loads.

Can multi-objective optimization improve PV/wt microgrid efficiency?

Robust multi-objective optimizing the PV/WT microgrid system incorporating multi-energy storage is suggested for future work using information gap decision theory considering efficiency, and reliability of hybrid microgrids and incorporating the adaptive real-time optimization.

Can storage-based Hybrid microgrids improve network performance?

Consequently, without considering the comprehensive forecasted data, the optimization and detailed planning of storage-based hybrid microgrids fail to inform the network planning of the logical capacities of storage to enhance the network's performance by better compensating for fluctuations in renewable energy sources' power.

What factors affect the configuration of energy storage in microgrids?

The fluctuation of renewable energy resources and the uncertainty of demand-side loads affect the accuracy of the configuration of energy storage (ES) in microgrids. High peak-to-valley differences on the load side also affect the stable operation of the microgrid.

Does capacity configuration optimization improve the stability of microgrids?

To improve the accuracy of capacity configuration of ES and the stability of microgrids, this study proposes a capacity configuration optimization model of ES for the microgrid, considering source-load prediction uncertainty and demand response (DR). First, a microgrid, including electric vehicles, is constructed.

Does particle swarm optimization work in a standalone microgrid?

This study presents an optimization framework for the design and operation of a standalone microgrid with electrical and hydrogen loads. Two energy management strategies have been proposed and the optimization model is solved using particle swarm optimization algorithm.
