

What is a two-stage grid-connected inverter for photovoltaic (PV) systems?

In this study, a two-stage grid-connected inverter is proposed for photovoltaic (PV) systems. The proposed system consists of a single-ended primary-inductor converter (SEPIC) converter which tracks the maximum power point of the PV system and a three-phase voltage source inverter (VSI) with LCL filter to export the PV supplied energy to the grid.

Which mode of VSI is preferred for grid-connected PV systems?

Between the CCM and VCM mode of VSI, the CCM is preferred selection for the grid-connected PV systems. In addition, various inverter topologies i.e. power de-coupling, single stage inverter, multiple stage inverter, transformer and transformerless inverters, multilevel inverters, and soft switching inverters are investigated.

What are grid-connected PV inverter topologies?

In general, on the basis of transformer, the grid-connected PV inverter topologies are categorized into two groups, i.e., those with transformer and the ones which are transformerless. Line-frequency transformers are used in the inverters for galvanic isolation of between the PV panel and the utility grid.

Are VSI inverters effective in a grid-connected PV system?

For DC to AC inversion purposes, the use of VSI in the grid-connected PV system is gaining wide acceptance day by day. Thus, the high efficiency of these inverters is the main constraint and critical parameter for their effective utilization in such applications.

What are the different types of grid-connected PV inverters?

Configurations of the grid-connected PV inverters The grid-connected inverters undergone various configurations can be categorized into four types, the central inverters, the string inverters, the multi-string inverters and the ac module inverters.

What is the control design of a grid connected inverter?

The control design of this type of inverter may be challenging as several algorithms are required to run the inverter. This reference design uses the C2000 microcontroller (MCU) family of devices to implement control of a grid connected inverter with output current control.
