

What is a solar inverter?

Solar inverters are essential components of PV systems. They convert the direct current (DC) generated by PV modules into alternating current (AC). SMA PV inverters are compatible with the PV modules of leading manufacturers. We also supply the right inverter for every area of application, be it a home, business or industry.

Are SMA PV inverters compatible with PV modules?

SMA PV inverters are compatible with the PV modules of leading manufacturers. We also supply the right inverter for every area of application, be it a home, business or industry. Learn more about our innovative technology here. Integrated intelligence for future-proof system design. The three-phase hybrid inverter for homeowners

How to pair a solar inverter with a PV plant?

In order to couple a solar inverter with a PV plant, it's important to check that a few parameters match among them. Once the photovoltaic string is designed, it's possible to calculate the maximum open-circuit voltage ($V_{oc,MAX}$) on the DC side (according to the IEC standard).

What types of inverters are used in photovoltaic applications?

This article introduces the architecture and types of inverters used in photovoltaic applications. Inverters used in photovoltaic applications are historically divided into two main categories: Standalone inverters are for the applications where the PV plant is not connected to the main energy distribution network.

What is the I-V curve of a solar PV module?

As a standard rule, this curve is available in each PV module's datasheet and is calculated according to the Standard Test Condition, STC: (1000 W/m², 25 °C, IAM 1.5). To better understand IAM, read How Radiation and Energy Distribution Work in Solar PV. Figure 3 - Example of I-V curve of a PV module. Image courtesy of PVEducation.

What is a photovoltaic (PV) panel?

The solar panel or PhotoVoltaic (PV) panel, as it is more commonly called, is a DC source with a non-linear V vs I characteristics. A variety of power topologies are used to condition power from the PV source so that it can be used in a variety of applications such as to feed power into the grid (PV inverter) and charge batteries.

Solar inverters are essential components of PV systems. They convert the direct current (DC) generated by PV modules into alternating current (AC). SMA PV inverters are compatible with the PV modules of leading manufacturers. We ...
