

How to choose an inverter for a grid connected PV system?

When specifying an inverter, it is necessary to consider requirements of both the DC input and the AC output. For a grid connected PV system, the DC input power rating of the inverter should be selected to match the PV panel or array.

How do I choose a PV inverter?

Based on the available area, efficiency of PV modules used, array layout and budget. Selecting one or more inverters with a combined rated power output 80% to 90% of the array maximum power rating at STC. Inverter string sizing determines the specific number of series-connected modules permitted in each source circuit to meet voltage requirements.

Can a solar inverter be installed manually?

This allows one to manually isolate the solar system from the home's electric service panel and from the utility grid. Builders should be aware of these local requirements and make accommodations in the AC conduit run accordingly. The builder should not assume that the inverter installed will include an onboard manual AC disconnect switch.

What voltage does a solar inverter need?

The inverter's DC voltage input window must match the nominal voltage of the solar array, usually 235V to 600V for systems without batteries and 12, 24 or 48 volts for battery-based systems. 4.2.2. AC Power Output
Grid-connected systems are sized according to the power output of the PV array, rather than the load requirements of the building.

How do you ground a solar inverter?

System Grounding - System grounding requires taking one conductor from a two-wire system and connecting it to ground. In a DC system, this means bonding the negative conductor to ground at one single point in the system. This must be accomplished inside the inverter, not at the PV array.

Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.
