

Photovoltaic inverter rain cover installation diagram

How should a solar inverter be installed?

The humidity of the installation location should be below 100% without condensation. Do not install the inverter outdoors in salt, sulfur or other corrosive areas. Prevent the inverter from direct exposure to sun, rain and snow. The inverter should be well ventilated. Ensure air circulation. Never install the inverter in living areas.

How do I open the inverter cover?

The inverter cover must be opened only after shutting off the inverter P/ON/OFF switch located at the bottom on the inverter. This disables the DC voltage inside the inverter. Wait five minutes before opening the cover. Otherwise, there is a risk of electric shock from energy stored in the capacitors. **WARNING!** outlet are grounded properly.

How do I connect my inverter to a photovoltaic panel?

The electrical power and signals wiring from the inverter to the AC Grid and to the photovoltaic panel are connected through the Switch Boxes described in Fig.11 SB-01 - "DC Switch Box Layout" - using the access windows in pos "A" for the power cables and the windows in pos "D" for the signal cables.

Can I Touch the PV panels when the inverter switch is on?

Do not touch the PV panels or any rail system connected when the inverter switch is ON, unless grounded. **WARNING!** SafeDC complies with IEC60947-3 when installing the system with a worst case SafeDC voltage (under fault conditions) < 120V. **CAUTION!** This unit must be operated according to the technical specification datasheet provided with the unit.

What is a Growatt series photovoltaic inverter?

Require to order extra if you need it. Growatt series photovoltaic inverters are used to convert the direct current generated by photovoltaic panels into alternating current, and send it to the grid in a three-phase manner.

How far should a microinverter be from a PV module?

3 cm (1/2") between the back of the PV module and the top of the microinverter. For vertical mount, also maintain > 30 cm (12") clearance from the edges of the PV module to protect the microinverter from direct exposure to rain, UV, and other harmful weather events. **WARNING:** Install the microinverter under the
