

Photovoltaic panel aluminum trough waterproof construction plan

What is a fully integrated photovoltaic roof?

Figure 1. Fully integrated photovoltaic (PV) roof "RIS." The solutions that have been proven fall into the following categories: Interlocking panel systems, which either use panels that mimic roofing tiles with the photovoltaic (PV) element embedded in the surface or have a frame bonded to the PV panel which provides the sealing interlock.

Can a PV system be used on a roof?

Most types of roof have been used with a PV system at some time. The overall construction must be capable of taking the additional load of the PV (or indeed survive the additional uplift when the PV replaces a much heavier roof surface such as concrete tiles).

Should PV panels be over-roof mounted?

The over-roof mounting of PV panels has been the normal practice in many installations. It is simple in concept, and has been proven provided that the attachment through the traditional roof is performed well.

What makes aluminum solar panels unique?

Aluminum's aluminum solar panels are specifically designed to withstand even the harshest environmental conditions, ensuring consistent performance over the years. In addition to their functional properties, aluminum frames can also enhance the overall appearance of solar panels.

Does a solar mounting system need a waterproofing system?

A solar mounting system must be integrated with the existing roofing system to maintain its waterproofing integrity. This involves: Waterproofing: Ensuring that the mounting system does not compromise the roof's ability to repel water.

What documents should be included in a solar roof plan?

At a minimum, these documents must include specific documentation of dead loads, live loads, wind loads, and, where applicable, snow loads for the existing roof design. These plans will provide important information for the solar designer when the homeowner decides to install a system.
