

Photovoltaic panel construction project bidding

Are solar photovoltaic systems a good investment?

For sites with time-of-use (TOU) and/or demand rates, solar PV systems are to be designed to offset the greatest amount of electricity in higher cost-rate periods and achieve the greatest annual dollar savings. Feasibility evaluations to determine the potential size of solar photovoltaic systems have not been completed.

What happens if a solar contractor is awarded a contract?

Upon an award, the solar contractor is bound to execute the contract and begin performance. If another contractor that supplied a proposal thinks that it had the best value proposal, the contractor can question the government's evaluation process.

How can federal agencies implement on-site distributed energy projects?

Federal agencies can implement on-site distributed energy projects to help meet federal distributed energy goals and requirements using various procurement options. The Web tool is used to optimize energy systems for buildings, campuses, communities, and microgrids.

How can PV module potential-induced degradation (PID) be prevented or reversible?

PV Module Potential-Induced Degradation (PID) must be prevented or reversible through proper choice of inverter that are designed with PID prevention features. This section covers safety and reliability issues that are not yet considered to be covered adequately by current codes and standards.

Can a solar project cover more than two-thirds of a roof?

Proposals can include solar projects that cover more than two-thirds of the roof: this does not negatively impact the roof replacement and roof relocation plan, it will reduce the power purchase agreement (PPA) price, and it does not significantly increase the one-time relocation cost.

When should a contractor submit an electric utility interconnection process plan?

The Contractor shall submit an electric utility interconnection process plan to the government within 14 days of contract award. The plan shall include key steps, timeline, interconnection details, and assumptions necessary to complete the interconnection process.

The Federal Energy Management Program (FEMP) provides this tool to federal agencies seeking to procure solar photovoltaic (PV) systems with a customizable set of technical specifications. Select the plus sign in the rows below for more ...
