

Photovoltaic panel film cutting equipment

An EVA cutting & layup machine is used for EVA film loading, cutting, layup and hole punching in a solar panel production line. It can directly integrate tailings into new materials through standard hot melting procedures, improving the ...

The development of thin-film photovoltaics has emerged as a promising solution to the global energy crisis within the field of solar cell technology. However, transitioning from laboratory scale to large-area solar cells requires precise ...

The installations of photovoltaic (PV) solar modules are growing extremely fast. As a result of the increase, the volume of modules that reach the end of their life will grow at the same rate in the near future. It is expected that ...

The idea for thin-film solar panels came from Prof. Karl Böer in 1970, who recognized the potential of coupling thin-film photovoltaic cells with thermal collectors, but it was not until 1972 that research for this technology ...

We provide a wide range of manufacturing equipment for thin film (compound, organic, perovskite, etc.) and next-generation PV modules utilizing our 30 years of experience and expertise accumulated in providing silicone crystalline and ...
