

# Photovoltaic panel installation at Tianyi Power Plant

Are PV power plants expanding in different regions of China?

The uncovered expansion patterns of PV power plants in different regions of China hold significant value for understanding PV development and its land occupation in both space and time.

Where are PV power stations located in China?

Results show that PV power stations in China's 12 biggest deserts expanded from 0 to 102.56 km<sup>2</sup> from 2011 to 2018, mainly distributed in the central part of north China. The desert vegetation in the deployment area of PV power stations presented a significant greening trend.

Does China need a comprehensive map of PV power plants?

With the world's highest cumulative and fastest built PV capacity, China needs to assess the environmental and social impacts of these established PV power plants. However, a comprehensive map regarding the PV power plants' locations and extent remains scarce on the country scale.

What is China's new PV installed capacity?

In the first three quarters of 2020, China's newly added PV installed capacity was 18.7GW, higher than the level of the same period of last year. In the fourth quarter, it showed explosive growth, making the annual newly added installed capacity reach 48.2GW, including 32.68GW of centralized PV and 15.52GW of distributed PV.

How many ground-mounted PV power stations are there in China?

According to our dataset, China has a total of 2467.7 km<sup>2</sup> ground-mounted PV power stations in 2020. The top three largest provinces refer to Xinjiang, Inner Mongolia and Qinghai, whose PV area ratio are 14.92%, 12.49% and 11.26%, respectively, with a total of nearly 40% of all the PV power stations of China.

Does China have a spatial map of PV power stations?

Although some researchers released several PV power station maps, most only met a medium resolution of 30 meters [9,10]. There thus still lacks a national map of China's PV power stations with a higher spatial resolution (i.e., 10 meters) that could provide a global understanding of PV's spatial deployment patterns.

4. In-situ step-up transformers for solar power plants can be used with double-winding transformers and split transformers. 5. In-situ step-up transformer for the solar power plant is recommended to use without the excitation voltage ...
