

# Photovoltaic panel installation has a future

Is solar photovoltaics ready for the future?

Solar photovoltaics (PV) is a mature technology ready to contribute to this challenge. Throughout the last decade, a higher capacity of solar PV was installed globally than any other power-generation technology and cumulative capacity at the end of 2019 accounted for more than 600 GW.

Why is the solar PV panel market so competitive?

The high level of competition in the solar PV panel market, mainly due to the future market demand in and the competitiveness of leading countries, is compounded by the fact that transporting solar energy equipment is less cumbersome than transporting other renewable technologies (such as wind).

Will solar PV be the future of electricity?

In the REmap analysis 100% electricity access is foreseen by 2030, in line with the Sustainable Development Goals, and solar PV would be the major contributor to this achievement. costs are expected to reduce further, outpacing fossil fuels by 2020 (IRENA, 2019f).

How has the solar PV industry evolved in recent years?

The evolution of the solar PV industry so far has been remarkable, with several milestones achieved in recent years in terms of installations (including off-grid), cost reductions and technological advancements, as well as establishment of key solar energy associations (Figure 5).

Is the future of solar PV employment bright?

Despite setbacks, there is reason to believe that the future of solar PV employment is nonetheless bright, given the urgency for more ambitious climate and energy transition policies, as well as the expectation that countries are learning important lessons on the design and coherence of policies.

How many GW of photovoltaic installations are there in the world?

As a result of sustained investment and continual innovation in technology, project financing, and execution, over 100 MW of new photovoltaic (PV) installation is being added to global installed capacity every day since 2013, which resulted in the present global installed capacity of approximately 655 GW (refer Fig. 1).
