

Installing solar photovoltaic systems requires specialized skills and knowledge. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements.

The PV modules shall conform to the following standards: IS 14286: Crystalline silicon terrestrial photovoltaic modules determine the resistance of PV Modules to Ammonia (NH₃) The PV module should have IS 14286 qualification certification for solar PV modules (Crystalline silicon terrestrial photovoltaic

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

r the specifications for the PV Module is detailed below: The PV modules must be PID compliant, salt, mist & ammonia resistant and should withstand weather conditions for the project life cycle. The back sheet of PV module shall be minimum of three layers with outer layer

A photovoltaic system composed of UL1703 certified modules mounted on a UL2703 certified mounting system should be evaluated in combination with roof coverings in accordance with UL1703 standard, with respect to meeting the same fire classification as the roof assembly.

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.
