Equivalent circuit of a solar cell  
Working explanation  
Photogeneration of charge carriers  
The p-n junction  
Charge carrier separation  
Connection to an external load  
See also  
An equivalent circuit model of an ideal solar cell's p-n junction uses an ideal current source (whose photogenerated current increases with light intensity) in parallel with a diode (whose current represents recombination losses). To account for resistive losses, a shunt resistance and a series resistance are added as lumped elements. The resulting output current equals the photogenerated curr...
