

Photovoltaic panel support construction drawings

Do you provide installation layouts for roof-mounted solar panels?

We provide installation layouts for roof-mounted solar panels and possess extensive experience in such projects from certified panel installers. Our dedicated solar panel detailing team has the capabilities for creating preliminary, permit and installation drawings for residential as well as commercial buildings.

What documents should be included in a solar roof plan?

At a minimum, these documents must include specific documentation of dead loads, live loads, wind loads, and, where applicable, snow loads for the existing roof design. These plans will provide important information for the solar designer when the homeowner decides to install a system.

Are as-built solar drawings accurate?

In the realm of solar engineering, where precision and efficiency are paramount, the significance of accurate as-built drawings cannot be overstated.

What are photovoltaic panels & how do they work?

They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a "post" and rail mounting system, the most common in the industry today, will be installed by the homeowner.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m²/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

Can a solar array be installed on a pitched roof?

If the proposed solar array location is on a surface that does not fall under the specification's basic assumption of a single family home with a pitched roof that offers adequate attic access, EPA recommends that the builder consult with a certified solar energy professional when evaluating the home.
